

Combination of Top Flight Concepts Software and Services Aids Logistics Entrepreneurs to Start Own Business in < 30 Days

Software's Ease of Use Plus Knowledgeable Staff Create Path to Success

Atlanta, Georgia – April, 2007 – Top Flight Concepts LLC, provider of freight management and broker software solutions that connect transportation managers to carriers for best prices and real-time delivery status, announces that the combination of its flagship product, TFConnect™, and services allows any enterprising individual to start their own freight payment company or freight brokerage firm in less than 30 days. TFConnect offers innovative features in an easy-to-learn, easy-to-use format that powers their business from freight quote through payment and audit. Entrepreneurs want to enter the freight payment market to share part of the \$750M spent in freight charges by US companies annually, according to the Council of Supply Chain Management Professionals (CSCMP).

"I started a freight payment company from scratch three weeks ago," said Allan Bogardus, president of Transportation Management Co-op. "With consulting help from Top Flight Concepts logistics experts along with services, training, and software, I was able to negotiate freight rates, audit freight bills, and perform routings from start-up. TFConnect quickly delivers the ability to increase operational and financial efficiencies."

"Our sophisticated freight management and shipping system, TFConnect, manages freight payments effectively, accurately, and quickly," said Dave Thomas, president of Top Flight Concepts LLC. "Customers handle thousands of freight bills - with unmatched speed, complete accuracy. and total convenience."

For Transportation Management Co-op, timely and accurate rating was essential to the business. Top Flight Concepts evaluated current freight rates and proposed new base rates, then worked with carriers to move the rates into the commercially available SMC Czar format. TFConnect provides highly flexible rating options – for brokers, the software gives rates to charge customers and rates that carriers charge – with profits instantly available.

TFConnect was customized with tariff management functionality and financial extensions for tracking accounts receivables and accounts payables. Top Flight developed a web portal for Allan and his customers to search for best freight rates, review delivery schedules, and perform routings.

TFConnect's freight payment and audit functionality will allow Transportation Management Co-op to eliminate the need for manually reviewing freight bills, thus keeping personnel requirements and overhead low. The software accesses carrier websites and retrieves tracking information for assigning loads.
